

# WellKiwis household study: Yearly study activities

## After enrolment

Household and participant questionnaires

Baseline blood sample for those who have never provided one

## Influenza season

April May June July August September

Weekly online surveys on vaccination. If you report receiving a flu/COVID-19 vaccine\* our clinical staff will collect a post-vaccine blood sample 3-6 weeks after the vaccination.

*\*Please note: it is your choice whether you want to have a flu/COVID-19 vaccine.*

Weekly online surveys on influenza-like illness (ILI)

**If you report an ILI**, our clinical staff will assess your symptoms and may contact you, and may arrange a time to meet with you and take a swab.

**If the swab result is POSITIVE for influenza/COVID-19**

Our clinical staff will take a swab every 3rd day from each participating household member until two consecutive negative results are returned.

Our clinical staff will collect a pair of bloods from you and your household members (one blood 1-2 weeks after the first swabbing and another one 4-7 weeks after).

Daily symptom monitoring.

## Influenza off-season

October November December January February March

*If no ILI reported*

**\*\*Annual blood**

**Annual survey and study updates**

*\*\*Please note: you will receive a gift card after providing any swab or blood sample*
